IMPROVING THE GATEWAY TO STRATFORD-UPON-AVON

The proposed transport interchange

The transport interchange

Stratford-upon-Avon railway station and car park

Redrow has been consulting with Network Rail and London Midland to discuss the impact of the proposals on the railway station and its surroundings.

The improvements to the access and creation of a bus/rail interchange will benefit rail users. It is hoped that the provision of public transport at the site will lead to reduced car usage for station users.

Parking for rail users is currently provided by the railway station car park. The existing 80 spaces will be increased to 140, together with improved disabled parking.

Bus/rail interchange

The revised proposals will provide a long-awaited bus/rail interchange on site, which was also a condition of the existing planning permission.

The bus/rail interchange will include seven bus stops.

Taxi rank and drop-off points

There will also be a formalisation of the taxi rank making the area safer for users. There will be a taxi rank for five taxis to the south of the railway station on the way in to the town centre.

There will also be a "kiss-and-drop" zone so that rail users can be dropped off immediately outside the railway station entrance.
